

# Medical Passport Introduction

## Dear Care Provider \* :

Assuring that the health needs of children in out-of-home care are met is a major responsibility for you and the child's Social Service Worker. This Medical Passport was developed to help with this important task. It has been designed to be used for all children in out-of-home care, including medically fragile children, who are placed in resource homes, emergency shelters, private child care facilities, psychiatric and medical settings. It is given to the Care Provider at the time the child is placed. The Medical Passport must be maintained continuously throughout placement and accompany the child as long as he remains in out-of-home care.

The **SOP** and forms referred to in this Passport can be found at [http://manuals.chfs.ky.gov/dcbs\\_manuals/DPP/index\\_dpp.asp](http://manuals.chfs.ky.gov/dcbs_manuals/DPP/index_dpp.asp).

**SOP 3A.7** states that *“resource parents are to cooperate with the Cabinet in the medical and dental care planning for the child by: (a) scheduling appointments as needed; (b) keeping immunizations current; (c) reporting to the Cabinet all encounters with medical providers and any corrective or follow-up medical or dental care the child needs; (d) maintaining the medical passport with all medical information relating to the health history and on-going medical care of the child; (e) assisting DCBS in obtaining initial health screening within 48 hours of placement of the child; and (f) transporting children to necessary health-related (e.g. mental health, medical, dental, vision) appointment as needed.”*

## Why is the Medical Passport so important?

1. It ensures that all pertinent information pertaining to a child's health care is kept in one place. This benefits the child in providing timely service when basic medical records are needed at a moment's notice for medical care and emergencies or events such as case review, court, school enrollment, day care enrollment, and treatment planning conferences, etc.
2. Continuity of medical care is provided.
3. State Law requires that all children in out of home care receive regular medical care. State and Federal Law require the documentation of this care (**SOP 7E.4.1**).
4. Care Provider Liability - Lack of documentation is equal to lack of services. In other words *“If you don't write it down, it didn't happen!”* The medical passport documentation provides verification that this medical care is taking place.
5. A child's needs and history are more easily explained to birth parents and other Care Providers upon changes in placement or changes of Social Service Workers.

## How do I use this Medical Passport?

**SOP 3A.7** states that *resource parents are to maintain “the medical passport with all medical information relating to the health history and ongoing medical care of the child”*. If the child will be accompanied to the appointment or exam by a Social Service Worker or transportation aid in lieu of the Care Provider, then the Social Service Worker or Care Provider will assume responsibility for the passport, share it with the medical professional, and assure that all forms are completed. Care Providers should not assign these responsibilities to the child in the Care Provider's absence.

The medical passport includes tabs that are designed to be used with the three ring passport binder. Children who are medically fragile or who have special health care needs may require more space for documentation and record keeping. Therefore, the Care Provider may separate the tab sections into more than one volume as needed. Each child should have his/her own binder, even if siblings reside in the same foster home. Each tab section includes instructions on how to utilize the forms for that section. Other helpful hints are also included.

*\* In this Medical Passport, the term “Care Provider” is used to define the responsible person with whom the child lives in out-of-home care.*

### What about all of the forms?

The forms specifically designed for use in the medical passport are the DPP-106 series. In March of 2007 the form suffixes were updated. The old and new designations in the forms top left corner are as follows:

FORM	OLD NUMBER	NEW NUMBER
"Authorization For Medical Treatment"	DPP-106A-1	DPP-106A
"Medical History" now called "Initial Health Interview with Family"	DPP-106A	DPP-106B
"Child Medical History and Annual Physical Exam"	DPP-106	DPP-106C
"Medical Appointment"	DPP-106A-2	DPP-106D
"Dental Care"	DPP-106A-3	DPP-106E
"Visual Screening"	DPP-106A-4	DPP-106F
"Mental Health Services"	DPP-106A-6	DPP-106G
"Medications History" now called "Prescription and OTC Medication Administration"	DPP-106A-5	DPP-106H
"Methamphetamine Exposure Medical Evaluation and Follow-up"	None	DPP-106I

Forms A through H will be used at some point during the child's stay in out-of-home care. If you run out of forms or your Passport did not have a particular form to begin with, request them from the child's Social Service Worker and be persistent. A blank copy of Prescription and OTC Medication Administration (DPP-106H) should be kept from which to make copies as needed. A blank Methamphetamine Exposure Medical Evaluation and Follow-up form (DPP-106 I) is not included in this Passport. It is to be completed by a Social Services Worker at the time of a child's medical evaluation. The Social Services Worker completes the form because the initial evaluation is to take place two to four hours after a child's removal from the Methamphetamine environment.

It is very difficult to get forms filled out by medical professionals a few days or weeks after the appointment. Not having blank forms is no excuse for failing to include them in the passport. Photo copies of blank forms may be used. If photocopied forms are used, additional copies must be made for the case file once the forms are completed.

Other forms and documents used by medical professionals may be added to the passport in addition to the above forms. These may be filed under the appropriate related tab sections.

### How are copies of the forms distributed?

Medical passport forms are either a single page or composed of carbonless paper forms with white and yellow copies. Once completed, the white copy or the original is to be kept in the passport binder. A photo copy or the yellow carbonless copy is to be given to the child's Social Service Worker to notify him / her of the medical status of the child and is to be kept in the child's case record. Photo copies or the yellow copies of medical, dental, and visual screening forms should be given to the child's Social Service Worker within one week of the appointment. Photo copies or the yellow copies of medication forms should be given to the child's Social Service Worker at the end of each month.

Passport forms in the child's case file must be available for review by many service professionals. Medical professionals are encouraged to write legibly and press firmly. If you have a yellow copy and it cannot be read, please give the Social Service Worker a photo copy of the white original for the case file.

DO NOT allow the medical professional to keep the original completed forms. Encourage them to make photo copies and return the originals and carbons, if applicable, for passport use. You may also want to make copies of completed forms for activities such as day care, school, and camp registration/enrollment. If you do not have a resource to make photo copies, these may be made at your local DCBS office.

# Important Information

Effective Date: \_\_\_\_\_

This page should be completed with current information once a child enters out-of-home care and should be updated using the “**Important Information Updates**” boxes on the next tab / page as needed. Past history information should be provided in the “Medical History” section.

Child's name: \_\_\_\_\_ Date of Birth: \_\_\_\_\_

IMPORTANT  
INFORMATION UPDATES

## Medical Passport Tracking History

**Date of Original Medical Passport Issue:** \_\_\_\_\_

It is important that this medical passport accompany a child throughout his/her stay in out-of-home care for consistency and continuity of care. It is very difficult to recreate and/or relocate records when they are lost between placements. For this reason, Care Providers\* are required to sign that the medical passport is received upon the child's entry into their home/facility. Please record the date, type of Care Provider, and signature in columns 1, 2, 3 and 4. For type of Care Provider, see key below.

When a child leaves a foster home/other facility (i.e. changes placement), the passport is to be returned to the child's Social Service Worker immediately. The Social Service Worker will then sign the date returned entry (columns 5 and 6), make a photo copy of this page for the child's case record and most recent Care Provider and forward the passport to the appropriate new Care Provider, or birth parent (columns 1, 2, 3, and 4). Additional space is provided on the back of this page for continuation.

When the child leaves for respite, Care Providers should make copies of the appropriate pages of the passport which may be needed the respite period. In some cases, extended respite may require that the entire passport be transferred to the respite provider. Care Providers may use their own judgment to determine if this is necessary. Use this page to transfer the passport in such cases.

[illegible]

**Key for Type of Care Providers:**

**AH = adoptive home**

**BH = birth home**

**CP = care plus**

**D = detention**

**E** = emergency shelter

**FH = foster home**

**H** = hospital

**J** = juvenile justice facility

**MF = medically fragile foster home**

**PAH** = pre-adopt home

**PCC FH = private child care foster home**

**PCC GH = private child group home**

**PRTF** = psychiatric residential treatment facility

**R** = relative/kinship care

*\* In this Medical Passport, the term "Care Provider" is used to define the responsible person with whom the child lives in out-of-home care.*

*Please make additional copies of this page as needed for continuation.*

# Medical History

## Introduction:

In order to provide for the immediate and ongoing medical needs of the child placed in out-of-home care, it is important to know as much as possible about the medical history. Prior to placement in out-of-home care, sources for this information are birth parents, relatives, prior out-of-home Care Providers, medical providers, medical records, school and day care records.

Most medical history information will be collected by the child's Social Service Worker prior to placement or at the initial out-of-home care conference, usually held within 5 days of placement. However, Social Service Workers and Care Providers may become aware of other medical history information during the course of the child's placement. All medical information received by the Worker or Care Provider must be shared between these two parties verbally as well as documented in the passport.

Any available medical records related to a child's history should be copied for the Medical Passport and shared with medical professionals. Care Providers may keep these documents in this section of the medical passport.

## Using The Form ("Initial Health Interview with Family" DPP-106B) :

The child's Social Service Worker is to help the birth parent or primary care giver of the child fill out this form. It is important that the form be filled out completely and signed by the parent so that there is no question later as to the parent's or caregiver's understanding of the child's medical history, current state of health, and any medical needs and / or conditions requiring immediate response upon entry into out-of-home care.

Parents should be as specific as possible regarding types of allergies, special medical conditions, recent and past health problems and illnesses. Dates of illnesses or approximations should be recorded on this form. Surgeries should be listed specifically in the "other" section along with type and date of the procedure.

When changes or additions occur (such as allergies discovered, surgeries, and illnesses occurring in out-of-home placement like chicken pox, etc.), these are to be recorded on a new (additional) DPP-106A Medical History form and filed in this section with a photo copy or the yellow carbonless copy returned to the child's Social Service Worker. If you do not have a resource to make photo copies, these may be made at your local DCBS office.

The Medical History form should be discussed with the medical professional at the child's initial exam following entry into out-of-home care. Every effort should be made to complete this form prior to this initial exam.

## Copies of Other Documents to be Included in this Section:

- ☐ Birth Certificate
- ☐ Immunization Record
- ☐ Most Recent Physical Prior to Child's Entry into

- ☐ Out-of-Home Care
- ☐ Significant Medical Records Prior to Placement
- ☐ Social Worker's Assessment of the Child Upon
- ☐ Entry into Care
- ☐ Allergy Information
- ☐ Care Provider Assessment of the Child Upon
- ☐ Entry to their Home/Facility
- ☐ Hospital Discharge Summaries Prior to Placement
- ☐ Mental Health Evaluations and Testing Prior to Placement

## Past Medical Professionals for this Child:

*Please list medical providers prior to the child's placement in out-of-home care. Additional spaces are provided on the back of this page.*

# Payment for Medical Services

## Medical Assistance Cards

The majority of children in out-of-home care are eligible for the Kentucky Medical Assistance Program (Medicaid), and therefore will receive a medical card to cover their general medical needs. Please be aware that not all medical facilities and providers accept the medical card as a form of payment. Check with the child's Social Service Worker or your local Department for Community Based Services (DCBS) Family Support office for a listing of accepting providers in your area.

## How do I know if my child is eligible for the Kentucky Medical Assistance Program?

Following placement in out-of-home care, the child's Social Service Worker will apply for the medical assistance card within two weeks. It may then take up to a month for the card to be issued. Please understand that this process may be delayed if necessary documents such as birth certificates and / or social security cards are not accessible and need to be applied or reapplied for prior to application for the medical assistance card.

## How do I get the medical card if my child is eligible?

A paper or plastic medical assistance card is generally issued to the Social Service Worker in the child's name. It is mailed to the local DCBS office. There it will be copied for the file. The original paper or plastic card will be mailed to you. Plastic cards are issued only once. A new paper card is mailed at the beginning of each month.

## What if I am waiting for a medical card for my child and he needs medical care?

Often a child must first be removed from a birth parent's medical card before a card in the child's name can be issued. Your child will need arrangements for appointments for medical care (i.e. at least a complete physical, dental, and visual exam) within the first two weeks of placement. The Care Provider needs to make every effort to have these appointments with the child's current medical provider. However, you do not need to wait on the medical card before accepting an available appointment. Explain the situation and have the bill sent to the DCBS office. **Do not pay for medical services yourself or list your name or the Social Service Worker's name as the responsible party for payment.**

## How long do I keep my child's medical card?

Medical assistance cards should be maintained in the medical passport for the length of stay in out of home care. If monthly paper cards are being used, they should be kept to the end of

the next month to cover past services for which you may receive bills. Return these bills to the health care facility along with a photo copy of the medical card for payment. Paper Medical cards are invalid after one year and may be discarded.

Medical cards should be kept in this section and sent along with the child when he/she leaves your home/facility.

## Private Insurance

Some children in out-of-home care remain eligible for private insurance under their birth parent's or guardian's health care plan. In this situation, the child's Social Service Worker will request a copy of the child's insurance card from the birth parent or guardian and provide a copy of it to you. You may contact the insurance company for a list of accepting medical providers in your area.

If the private insurance plan does not cover 100% of the medical, dental, or other related expenses, the child may be eligible for the Kentucky Medical Assistance Program as a secondary payment source. The child's Social Service Worker will apply for a medical card for this purpose. Please refer to the information in the previous section entitled "Medical Assistance Cards."

## Payments for Special Expenses

On occasion, you may encounter some medical, medications, or related expenses for children in out-of-home care that are not covered by The Kentucky Medical Assistance Program or private insurance.

**Please talk with the child's Social Service Worker to arrange for a special needs payment before arranging services or paying expenses on your own.** Justification must accompany bills for medical expenses and state if the child was ineligible or if the service was not covered by Medicaid or private insurance. **Please remember that approval must be granted in advance of any treatment.**

## Medical Expenses During Out-of-State Travel

Kentucky Medical Assistance Cards are invalid for payment of medical services out of state. Care Providers may obtain an out of state travel form from the child's Social Service Worker stating the Cabinet is the guarantor for payment of any medical services incurred while the child is out-of-state. **This form must be notarized.**

- ### Notes:

[illegible]

# Authorization for Medical Treatment

## Introduction:

Seeking medical care and treatment for the child in out-of-home care is not as simple as it may be for a biological child because you are not the child's biological or legal parent. **Care Providers are not authorized to sign for any medical services or treatment unless it is an emergency and the child requires immediate medical attention (see Procedures below).** Other parties such as the child's biological parent, in some cases, and the Cabinet, in all cases have legal rights, responsibilities, and liabilities in providing for this child. To properly involve the appropriate parties, protect yourself, and provide the best possible care for your child, make sure that proper authorization procedures are followed. Please copy this section for all respite providers so that proper procedures are followed in the absence of the primary Care Provider.

## Authorization Procedures (SOP 7E.4.5):

Type of Custody/Commitment	Situation	Approval by
Temporary Custody/Emergency Custody	Medical Services	Birth Parent or District/Family Court Judge by written approval
Temporary Custody/Emergency Custody	Emergency	Birth Parent, District/Family Court Judge, Social Service Worker (if parent and judge unavailable) Care Provider (if Worker unavailable)
Committed to Cabinet	Medical Services	Birth Parent or Social Service Worker
Committed to Cabinet	Emergency	Birth Parent or Social Service Worker or Care Provider (if Worker unavailable)
Parental Rights Terminated	Medical Services	Social Service Worker
Parental Rights Terminated	Emergency	Social Service Worker or Care Provider (if Worker unavailable)
Voluntary Commitment	Serious Illness/ Major Surgery	Birth Parent or Social Service Worker (if parents unavailable)
Voluntary Commitment	Emergency	Birth Parent, Social Service Worker, Care Provider (if Worker and birth parent unavailable)

Birth parents shall be notified as soon as practicable of any emergency medical treatment, serious illness, or major surgery. When a critical situation occurs, a caregiver initiates attempts to report the situation to the SRA, or designee, immediately. The SSW or other staff assigned by the SRA or designee notifies the child's family within one (1) working day. The Service Region Administrator and Commissioner are also notified by the worker in the case of serious injury to a child in out-of-home care (**SOP 7E.3.15**).

## Using The Form ("Authorization For Medical Treatment" DPP-106A)

The child's social worker is to complete this form upon the child's entry into out-of-home care. If the custody or commitment status changes, the worker is to fill out a new form with the appropriate date of the change and add it to this section. For your general information:

- \* Emergency Custody does not last longer than 72 hours.
- \* Commitment to the Cabinet has no time limit.
- \* Temporary Custody lasts up to 45 days and in some cases may be extended by a judge's order.
- \* Voluntary Commitment lasts for 6 months unless it has been extended upon formal review.

Please file the original or white copy and all subsequent DPP 106A-1 forms in this section of the Medical Passport. Give a copy or the yellow copy to the Child's Worker to be filed in the child's case record. If you do not have a resource to make photocopies, these may be made at your local DCBS office.

14

# Medical Appointments

## Introduction:

It is imperative that all children in out-of-home care be provided with proper medical care. It is **REQUIRED BY STATE LAW** that all children in out-of-home care receive a complete physical upon entry into out-of-home care and annual physical each year thereafter (**KRS 605.110** and **SOP 7E.4.1**). Children under age two should have “well-baby” exams more often. Care Providers shall cooperate with the agency in the medical care planning for the child by scheduling appointments as needed (**SOP 3A.7**).

## What Does a Complete Annual Physical Include?

Your child’s annual physical is much more than a visit to the doctor’s office. It cannot be replaced or exchanged for a “sick visit” or follow up exam. Medically fragile children must also have an annual physical even though they may see a variety of medical professionals regularly.

There are a number of components that need to be completed annually to ensure that the child is continuing in good health and receiving proper care and to rule out and / or address special medical needs. An exam can be counted as an annual physical, provided that the following components are included:

- √ height and weight
- √ vital signs
- √ hearing and vision screening
- √ urinalysis
- √ blood screening (for nutritional needs, lead poisoning, communicable diseases)
- √ physical evaluation of:
  - ☞ eyes, ears, nose
  - ☞ throat, mouth, teeth
  - ☞ heart and lungs
  - ☞ abdomen
  - ☞ extremities
  - ☞ skin
  - ☞ posture
  - ☞ reflexes
  - ☞ genitalia
- √ immunizations (see schedule below)

## Immunization Schedule

Care Providers to children in out-of-home care are responsible for keeping immunizations current (**SOP 3A.7**). A copy of the child’s immunization record should be obtained and kept in the child’s Medical Passport (**SOP 7E.4.2**). The following is recommended by the Center for Disease Control, 1996.

Age	Immunization
2 months of age	Diphtheria, Tetanus, Pertussis (DTaP); Hepatitis B (Hep B) Polio (IPV) Haemophilus influenzae type b (Hib) PCV (prevnar) ROTAVIRUS
4 months of age	Diphtheria, Tetanus, Pertussis (DTaP); Hepatitis B (Hep B) Polio (IPV) Haemophilus influenzae type b (Hib) PCV (prevnar) ROTAVIRUS
6 months of age	Diphtheria, Tetanus, Pertussis (DTaP); Hepatitis B (Hep B) Polio (IPV) Haemophilus influenzae type b (Hib) PCV (prevnar) ROTAVIRUS  Note: HIB if previous doses were not Merck Brand
12 months of age	MMR-Measles, Mumps, Rubella C-POX HEP A#1 PCV (prevnar)
15 months of age	Diphtheria, Tetanus, Pertussis (DTaP); HIB HEP A#1 (if not given)
18 months of age	HEP A#2 (if #1 given) OR
24 months of age	HEP A#1 (if not given) HEP A#2 ( if #1 given) DTaP MMR-Measles, Mumps, Rubella IPV (polio)
11 - 12 years of age	Tdap (Boostrix)

## When Should I Take My Child to the Doctor?

### Upon Entering Out-of-Home Care:

DCBS **SOP 7E.4.1** states that “the Social Service Worker ensures that the child receives a physical health screening within forty-eight (48) hours of an order in which a child enters custody of the Cabinet, and treatment for any injury/illness that may be a result of maltreatment within twenty-four (24) hours.” And “Within two (2) weeks of a child entering out of home care, either via a temporary order of custody or commitment, the SSW makes arrangements for a complete medical, dental and visual examinations.”

The purpose of the screening and examination is to document the medical condition of the child upon entry into care and is essential to identify any special medical needs or conditions. Please bring a completed Medical History form (DPP 106A) to this appointment.

It is often difficult to get a physical exam within the time stated in the SOP. Try to explain the special circumstances and see if an appointment can be scheduled as soon as possible. If not, document your efforts and notify the child’s Social Service Worker.

Should the child not come directly to you from his birth family (i.e. from a shelter, etc.), check with the Social Service Worker to see if a physical has taken place or is scheduled. If it has already taken place, a copy of the medical appointment form should be filed in this section when you receive the passport. This exam is required even if the child comes to you from a medical facility.

Examinations are not required for children who exit and reenter care within 30 days, unless the child’s circumstances indicate otherwise.

The American Academy of Pediatrics recommends that the initial health screening include the following, in addition to the components of an annual physical:

- ◆ Measurement of head circumference
- ◆ Notation of bruises, scars, deformities or limitations in function
- ◆ X-rays if history of physical abuse
- ◆ Sexually transmitted disease testing when

indicated clinically or by history

- ◆ Pediculosis (lice) exam
- ◆ Developmental and mental health evaluation

Please let the physician know of any special needs or past circumstances which may affect the child’s comfortability with the exam such as history of sexual abuse, fears, etc.

### Annual Physical Exams:

Annual physical exams are **REQUIRED BY STATE LAW** for all children placed in out-of-home care (**KRS 605.110** and **SOP 7E.4.1**). The appointment should be scheduled annually and within 12 months from the appointment of the previous year.

### Prior to Age Two (“Well Baby”) Exams:

It is recommended by the American Academy of Pediatrics that the schedule below be followed for children under the age of two (this will assist in monitoring growth and development and assure that all required immunizations are received):

2 Weeks  
2 Months\*  
4 Months\*  
6 Months\*  
11 Months  
15 Months\*  
18 Months\*

\*Indicates when immunizations will coincide with these exams as required by the Center for Disease Control, 1996.

### School Physical Exams are scheduled as follows:

- ◆ Before entering Kindergarten (or the Early Start / 3-4 year-old programs)
- ◆ Before entering 6th grade (Middle School)
- ◆ Before participating in athletics

Immunizations will coincide with these exams as required by the Center for Disease Control, 1996.

These exams may take the place of the annual physical exam if they include the components listed on the previous page in the section entitled “What Does a Complete Annual Physical include?”

### Female Children:

It is recommended by the American Council on Obstetrics and Gynecology that girls who are or have been sexually active have an annual pelvic exam and pap smear.

Older girls may prefer to see an OB/GYN instead of a pediatrician. The OB/GYN can conduct the annual physical required for all children in out-of-home care. Please explain to the doctor why the exam is needed and how to use the form.

Pregnant girls in out-of-home care are required to receive appropriate prenatal care. These appointments should be scheduled monthly as soon as the Care Provider becomes aware of her pregnancy. A prenatal exam may not take the place of the annual physical required for all children in out-of-home care. Though the two may occur together, the components of the complete physical should not be omitted (see *What Does a Complete Annual Physical Include?* at the beginning of the **Medical Appointments** section).

### Other:

Your child should be taken to the doctor when ill or in need of special evaluation. Please take special care to keep scheduled appointments and / or call to reschedule in advance. Many medical professionals will bill for missed appointments when not properly cancelled or rescheduled. Please remember to reschedule any cancelled or missed appointments to ensure that your child receives his or her proper medical care.

### **Using the Forms (“Child Medical History and Annual Physical Exam” DPP-106C and “Medical Appointment” DPP-106D)**

The “Child Medical History and Annual Physical Exam” DPP-106C is used at a child’s very first medical check up upon entering care and each annual exam thereafter. The “Medical Appointment” DPP-106D form is to be filled out in its entirety at all other medical appointments: school physical exams, well baby exams, sick visits, specialist visits, prenatal exams, etc. Care Providers should fill in the date of the appointment, child’s name and date of birth, the reason for the appointment, and doctor’s name, address, and phone number to ensure that these are legible. Medical professionals are to fill in the results of the exam and sign the forms. Remember to press firmly if carbonless.

Please do not substitute school physical forms for this document. Explain to the medical professional that the

Cabinet tracks medical care using this form.

If you forget the forms, they may be filled out at a later date, however this can be burdensome. It may be helpful to leave a supply of blank forms in your car or with the medical professional in the child’s record so that they will be available when needed.

Completed original forms should be filed in this section with a copy or the yellow copy given to the child’s Social Service Worker. If you do not have a resource to make photo copies, these may be made at your local DCBS office.

### **Copies of Other Documents to be Included in this Section:**

-  Doctor’s Clinic Notes about particular visits/ exams
-  Emergency Department and Hospital Discharge Summaries
-  School Physical Forms

### Notes:

# Dental Appointments

## Medical Alert! Medical Alert!

This child has a heart condition (describe) \_\_\_\_\_

Premedication prior to dental treatment is required.

### Introduction:

Dental care for the child in out-of-home care is also very important. It is something that may have been overlooked by many birth families or previous placements, especially for children in constant transition. It is required by state law that all children in out-of-home care receive a complete dental exam upon entry into out-of-home care and annual exam each year thereafter (**KRS 605.110** and **SOP 7E.4.1**). Care Providers shall cooperate with the agency in the dental care planning for the child by scheduling appointments as needed (**SOP 3A.7**).

### When Should I Take My Child to the Dentist?

#### Upon Entering Out-of-Home Care:

Arrangements are to be made for a complete dental exam for all children entering out-of-home care within the first two weeks of placement (**SOP 7E.4.1**). This will document the child's dental condition upon entry into care and identify any special dental needs. As with medical appointments, it may be difficult to get the exam scheduled within a short period of time. Again, try to explain the situation and work with your dentist, document your efforts and notify the Social Service Worker.

Please let the dentist know of any special needs or past circumstances which may affect the child's comfortability with the exam such as history of sexual abuse, fears, etc.

#### Annual Exams and Cleaning:

These exams are **REQUIRED BY STATE LAW** for all children placed in out-of-home care (**KRS 605.110** and **SOP 7E.4.1**). The appointment should be scheduled annually and within 12 months from the appointment of the previous year.

The annual exam usually consists of an x-ray, cleaning, and oral exam. The American Dental Association recommends that young children wait until age three for this annual exam unless there is visible decay or other problems. The child's pediatrician or dentist can assist with other suggestions for young children.

#### Follow-up / Other:

Annual exams may often indicate the need for restorative work and require follow-up exams. Please take special care to keep these and all other dental appointments, cancelling and rescheduling as needed. Tooth decay does not improve with time!

The American Dental Association recommends routine exams and cleaning every six months, however the Kentucky Children's Health Insurance (medical card) will only pay for one annual exam. Should your child's special dental condition require more frequent exams, talk with the dentist about making a request for **pre-approval** to the Kentucky Medical Assistance Program. If this is denied, talk with the child's Social Service Worker about working out an alternative billing with the dentist and special needs payment (**KAR 1.350, SOP 3B.5**).

Any time you can see decay, your child complains of tooth pain, or teeth are injured, the child should be taken to the dentist.

## Referral:

Some children may require orthodontic or other special dental care (oral surgery, etc.) as recommended by the dentist. Children should have a complete dental evaluation before beginning specialty work. It is important to follow the course of treatment recommended by any specialist regarding frequency of exams, personal care, etc.

## **The Orthodontist and Other Oral Specialists**

**Orthodontic work must be pre-approved by medicaid if the child is medicaid eligible.** Usually the child is taken to an initial orthodontic evaluation appointment. The orthodontist then makes a report to the Kentucky Medical Assistance Program explaining the need and related costs. The approval process may take a number of weeks or months.

Once the report is submitted to the Kentucky Medical Assistance Program, do not switch orthodontists because the process must start all over. Do not switch orthodontists in the middle of a treatment course for the same reason. Services may not be reimbursed by medicaid in this situation.

If the child is not medicaid eligible, if private insurance does not exist or will not pay, or if medicaid denies approval for these services deemed necessary by the dentist / orthodontist, the child's Social Service Worker may arrange for a special needs payment through the Department. **Please remember that this approval must be granted in advance of any treatment.**

## **Using the Form ("Dental Care" DPP-106E)**

This form is to be filled out in its entirety at each dental/orthodontic appointment. Care Providers should fill in the date of the appointment, child's name and date of birth, and the dentist's or orthodontist's name, address, and phone number to ensure that these are legible. The dentist or orthodontist is asked to fill in all information related to the exam as indicated and sign the form. Remember to press firmly.

The "general appearance" section should state the reason for the particular appointment (i.e. annual cleaning, restoration needed, adjustment needed, appliance installed). It should also state the appearance / oral hygiene rating (i.e. good, fair, poor). The tooth status chart (middle section) should always be completed, even if there is no change from the last appointment. The follow-up appointment section should explain the need for the appointment (evaluation, restorative, annual, cleaning, etc.) and the date. If no follow-up is needed, enter the date of next annual exam on the line for the "next appointment."

If you forget the forms, they may be filled out at a later date, however this can be burdensome. It may be helpful to leave a supply of blank forms in your car or with the dentist / orthodontist in the child's record so that they will be available when needed.

Completed original forms should be filed in this section with a copy or the yellow copy given to the child's Social Service Worker. If you do not have a resource to make photo copies, these may be made at your local DCBS office.

## **Notes:**

---

---

---

# Eye Appointments

## Introduction:

Eye care for the child in out of home care is another important factor that may often be overlooked by many families. It is required by state law that all children in out-of-home care receive a complete visual exam upon entry into out-of-home care and annual exam each year thereafter (**KRS 605.110** and **SOP 7E.4.1**). This may be done as part of the initial and annual physical exams. However, should the child in your care have vision needs, the annual exam should be completed by an optometrist or ophthalmologist. Some resource parents have learned from experience that children younger than school age should have exams by a pediatric ophthalmologists for the most accurate results. A vision examination by an optometrist or ophthalmologist is **required** by the Department of Education for all children entering school (**KRS 156.160**). Care Providers shall cooperate with the agency in the medical care planning for the child by scheduling appointments as needed (**SOP 3A.7**).

## When Should I Take My Child to the Eye Doctor?

### Upon Entering Out-of-Home Care:

Arrangements are to be made for a complete vision exam for all children entering out-of-home care within the first two weeks of placement (**SOP 7E.4.1**). If there is no known problem, the vision screening may be done at the initial physical. However, if the child has vision problems (i.e. is already wearing glasses), these arrangements should be made with an ophthalmologist to check prescription, etc.

### Annual Exams:

These exams are **REQUIRED BY STATE LAW** for all children placed in out-of-home care (**KRS 605.110** and **SOP 7E.4.1**). The appointment should be scheduled annually and within 12 months from the appointment of the previous year.

If there is no known problem, the annual exam / screening may be done by the child's primary doctor as part of the annual physical. If a problem is discovered at the physical exam, the child should be taken to an ophthalmologist for further evaluation.

### Follow-up / Other:

Please take special care to keep follow-up and all other appointments, cancelling and rescheduling as needed. Vision problems can lead to developmental delays, poor school performance, and behavior problems if left untreated.

Any time a teacher recommends an eye exam, the child complains of vision problems, or eyes are injured, the child should be seen by an ophthalmologist.

## Using the Form ("Visual Screening" DPP-106F)

This form is to be filled out in its entirety at each eye exam.

It may be filled out by the child's primary care doctor at the initial out-of-home care exam and subsequent annual exams if the child has no need to see an eye doctor for identified vision problems. Care Providers should fill in the date of the appointment, child's name and date of birth, and the medical professional's name, address, and phone number to ensure that these are legible. Medical professionals are asked to fill in all information pertaining to the exam and sign the form. Remember to press firmly.

The "observation and results" section should state the reason for the particular appointment (i.e. annual exam, prescription adjustment, etc.). It should also state the diagnosis and vision rating in each eye.

The follow-up appointment section should explain the need for the appointment and the date. If no follow-up is needed, the date of the next appointment should be the next annual exam.

If you forget forms, they may be filled out at a later date, however this can be burdensome. It may be helpful to leave a supply of blank forms in your car or with the doctor in the child's record so that they will be available when needed.

Completed original forms should be filed in this section with a copy or the yellow copy given to the child's Social Service Worker. If you do not have a resource to make photo copies, these may be made at your local DCBS office.

## Glasses/Eye Wear

Lenses and some frames are Medicaid reimbursable. Your eye wear retailer will be able to assist you in selecting reimbursable frames. Should the child need frames that are not reimbursable or covered by private insurance, arrangements can be made with the child's Social Service Worker for a special needs payment (**SOP 3B.5**).

Changes in prescription are covered by Medicaid as often as needed. Frame replacement is only covered once per year. Should your child need additional frames due to growth or frequent breakage, you will need to negotiate special needs payment through your community based services office for billing from the eye wear retailer or to be reimbursed (**SOP 3B.5**).

### Notes:

This image shows a blank sheet of white paper with horizontal ruling lines. The lines are evenly spaced and run across the width of the page. There are no margins, text, or other markings on the paper.

## Medication Allergy Alert!

Medication:

Reaction:

### Introduction:

Medications and their management are just as essential if not more essential than taking your child to the doctor, dentist, therapist, or specialist. Medication provides for continuation of the treatment phase beyond the medical professional's office.

Care Providers are required to administer medications as prescribed and document the use of these medications for a child in out-of-home care. Care Providers should take special care to follow the use and proper regimen for each medication in order to carry out the medical professional's intent and plan for treatment.

### When Do I Give My Child Medication?

#### Prescription Medication:

Prescription medications are to be administered to a child according to the doctor's instructions on the medication bottle, box, etc. It is unlawful to change or skip dosage, change frequency, or medication without a doctor's order. Therefore, medication changes should be given to the Care Provider, by the doctor, in writing and changed on the prescription bottle. If a doctor does not provide the change in writing or if the change is made by telephone, request a written order immediately for your record and protection.

Care Providers can take a copy of a doctor's order on a prescription pad to the pharmacist and request that a new label be made. This will serve to protect the child and Care Provider. Many school and childcare centers will not administer medication other than the way it is indicated on the label.

It is also unlawful to give prescription medication to any other person than who is named on the prescription label.

**SOP 3A.7** states that *“resource foster parents are to give a child's prescribed medications only with a physician's prescription or authorization, and are to dispense in the exact amount of any medication prescribed for a child by a physician or dentist and may not stop medication without a physician's orders.”*

It is expected that DCBS staff not routinely authorize certain psychotropic drugs without prior consent from birth parents. For this reason the Care Provider should make every effort to inform the Department of the plan for medication even before it is prescribed.

It is preferred that psychotropic drugs be prescribed by a psychiatrist, rather than a pediatrician, for management of mood, emotional or behavioral disorder.

Some prescription medications may not be covered by the child's Kentucky Children's Health Insurance Program (KCHIP) Card or other health insurance. Care Providers should ask the doctor for an alternative medication that is covered or seek approval from the child's Social Service Worker for payment of the medication as a special expense.

#### Over-The-Counter Medications:

Children in out-of-home care are at risk for the use of over-the-counter (OTC) medications because Care Providers and Social Service Workers often know little about the child's medical history. For this reason, Care Providers should check with the child's doctor **before** administering any OTC medications and administer them according to the package or doctors instructions.

If the doctor suggests that the medication should be given differently than instructed on the package, ask that these instructions be written on a prescription pad or other written order. Also ask the child's doctor for a

standing order for any specific OTC medications the child may need. For the child's protection and your own, keep a copy of these within the passport folder.

OTC medications are not harmless just because they are sold without prescription. They may cause side effects or interfere with prescription medications that the child is also taking.

### Troubleshooting/Prevention of Medication Errors:

1. Make sure you can read the prescription order form before leaving the doctor's office.
2. When picking up a new prescription from the pharmacy, make sure the label matches the prescription order given by the medical provider. If there is a discrepancy, contact the doctor before dispensing.
3. Keep each child's medication separate and also separate from the medications of your own family members.
4. Check the bottle before administering the medication to make sure you are administering the right medication, to the right child, and in the right amount.
5. Make sure you administer the medication at the right time of day. Check with the doctor to see for example if "4 times daily" means every six hours or 4 times during the time of day the child is awake. Ask the doctor if there can be any flexibility in the schedule and get this in writing if so. Know the following abbreviations:

q.i.d = four times daily  
t.i.d. = three times daily  
b.i.d. = twice daily  
q.d. = once a day  
p.r.n. = as needed

6. Do not measure liquid medication (prescription or OTC) using a standard kitchen utensil or measure. Use a medication spoon or oral syringe.
7. Request that your pharmacist cut tablets for you when the dosage required is only a partial tablet.
8. Crush tablets and mix them with food only when

approved by the medical Care Provider. Sometimes this will cause medication to become ineffective.

9. Store medications as directed (i.e. away from light, refrigerate, etc.) and out of the reach / access of children.

### Using the Form ("Prescription and OTC Medication Administration" DPP-106H)

**SOP** requires that all medication (prescription and over-the-counter) administered to a child in out-of-home care be documented. From a legal standpoint, if it isn't written down, it didn't happen. This is an area in which Care Providers are extremely liable. Document to protect your child and yourself. (**SOP 3A.7**)

This form is to be filled out by the Care Provider or whoever is giving the medication. Each time a child is administered a dose of medication it should be indicated with the appropriate date and time. If doses are to be given at school, a separate form should be maintained there and collected / replaced each month. Record each medication name, dosage, and if/when a refill is due.

Information and observations such as side effects to watch for, reactions, or changes in medication should also be recorded on the form including the dates of each. Remember to get medication changes in writing from the doctor and ask that the medication label be changed as needed.

A new form should be used each month. File the original in this section and provide a copy to the child's Social Service Worker. If you do not have a resource to make photo copies, these may be made at your local DCBS office.

### Copies of Other Documents to be Included in this Section:

- ☐ Doctor's Orders Changing Prescriptions
- ☐ Standing Order for Over-the-Counter Medications
- ☐ Copies of Release Forms for Schools to Administer Medications
- ☐ Printed Information on Medication Side Effects Provided by the Pharmacy
- ☐ Instructions on Specific Medication Administration Provided by the Pharmacy

# Mental Health

## Introduction:

Providing for the mental health care of all children in out-of-home care is as essential as the provision of proper medical and dental care.

From infancy, a child's life becomes a complex and ever changing balance of systems interacting to form his or her environment. Child abuse and neglect place new forces on these systems, changing the balance and types of systems involved. Removal from the birth family home and placement into out-of-home care as a result of abuse, neglect, or dependency turns the child's systems and environment, as they are known, entirely upside down. Family, friends, surroundings, and schools all change in some form or fashion, and the child is often left with little ability to understand and possible feelings of loss, guilt, anger, and despair. It is therefore recommended that all children in out-of-home care be evaluated to assess the need for mental health services and that they receive those needed for support during placement in out-of-home care.

Mental health services can assist children and youth in communicating their feelings about separation and loss by providing a neutral party (therapist / counselor) for discussion. Mental health services benefit both the child and Care Provider by addressing additional areas such as anger and behavior management, socialization, abuse recovery, school performance, and parenting issues. The Care Provider should see themselves as potentially the strongest change agent who has contact with the child. They need to form a team with the therapist to understand, support, and respond strategically to the child's treatment issues.

## When Should My Child Receive Mental Health Services?

### Upon Entering Out-of-Home Care:

Arrangements should be made for an initial mental health screening to be performed by a qualified mental health professional for all children within 30 days of entering out-of-home care. It may be necessary for the child's Social Service Worker to make the referral for this service due to contract agreements between the Department and mental health agencies. Therefore, **Care Providers should discuss setting up the screening with the child's worker prior to scheduling an appointment.**

The mental health screening will serve to determine the child's mental health needs. When the screening indicates that further assessment or treatment is necessary, the Social Service Worker makes arrangements and documents service provision. Arrangements are made for initial service provision within two working days of the receipt of information.

It will be helpful for the Care Provider and child's Social Service Worker to share as much of the child's history as possible with the mental health professional prior to the assessment. This will help determine the method and techniques to be used and questions and topics to explore.

### As Recommended By The Mental Health Professional:

Some mental health services may include brief or long term individual or group sessions, play therapy, art therapy, psychiatric services, testing, evaluation, medication, and medication management. Following an initial assessment, the mental health professional will recommend what services should be provided and the frequency.

Most children participate in sessions weekly or twice monthly, while others may attend sessions daily, twice, weekly, or monthly. The frequency of services may often change during particular periods of stress or success. Periodic breaks in services may also be taken when a child has resolved his current issues or is not making progress.

Care Providers and Social Service Workers should work with the mental health professional to determine the best frequency for the child. Care Providers and workers may need to share transportation responsibility to enable the child to attend sessions as needed.

### During Times of Crisis or Major Change:

Children and Care Providers need additional support during times of family crisis and change. At these times, Care Providers should schedule additional sessions with the mental health professional if services are already in place or work with the child's Social Service Worker to make a referral for services.

Some times of crisis and change may include:

- A negative visit with birth parents
- Death (of a birth or foster family member or pet)
- Marriage or divorce of birth or foster parents
- Disruption or change in placement
- Addition of new child to placement or movement of another from placement
- Change of Social Service Worker
- Change of permanency goal (i.e. termination of parental rights and movement toward adoption)
- School-based behavioral/emotional problems suspension
- Legal issues (i.e. allegations against the child, criminal offenses, and preparation for court appearances)
- The onset of puberty

### **Medication Management**

Children in out-of-home care who are on prescription medication for behavior management or for treatment of a psychiatric diagnosis will require periodic appointments with a psychiatrist for medication management and monitoring. These appointments will be in addition to sessions with therapists or counselors who are not physicians and cannot prescribe or medically monitor medication. Medication management appointments are often scheduled monthly or quarterly and usually coincide with the time that a prescription refill is due.

Care Providers should share information with the psychiatrist about the child such as any behavior changes, weight gain or loss, eating and sleep changes, and other medications the child is taking.

### **Psychiatric Hospitalization**

Some children in out-of-home care may require temporary or longer term hospitalization in an acute psychiatric care facility or hospital.

The mental health professional and physician working with the child must make the recommendation and referral for hospitalization.

Once a child is admitted to a psychiatric hospital, it is essential that the Care Provider and child's Social Service Worker be involved as members of the treatment team. Care Providers who are planning to have the child return to their homes / facilities should take an active role in "parent" groups, visitation, and other support sessions provided. This will assist in planning for the child's discharge and success in treatment.

### **Using the Form ("Mental Health Services" DPP-106G)**

This form is to be filled out in its entirety at **each** counseling / therapy session and medication management appointment. Care Providers should fill in the child's name, date of birth, therapist or counselor's name and telephone number, psychiatrist's name and telephone number, and the date of the session or appointment. Mental health professionals are to fill in the remaining information and sign the form. Remember to press firmly.

The form is separated into two sections: "Counseling / Therapy Session" and "Medication Management Appointment." The Counseling / Therapy Session section must be filled out by the child's counselor or therapist at each individual or group session even if the information remains the same as the previous session.

The Medication Management Appointment section must be filled out by the psychiatrist / physician at each medication management appointment.

If you forget the forms, they may be filled out at a later date, however this can be burdensome. It may be helpful to leave a supply of blank forms in your car or with the mental health professional in the child's record so that they will be available when needed.

Completed original forms should be filed in this section with a copy or the yellow copy given to the child's Social Service Worker. If you do not have a resource to make photo copies, these may be made at your local DCBS office.

### **Copies of Other Documents to be Included in this Section:**

- ☐ Mental Health Services Referrals
- ☐ Mental Health Evaluations/Psychological Testing
- ☐ DCBS Pediatric Symptom Checklists / Behavior Rating Scales
- ☐ School Psychoeducational Testing
- ☐ Behavior Management Plans
- ☐ Psychiatric Hospital Discharge Summaries
- ☐ Copy of any psychotropic medications given by another physician

## Medically Fragile and Children with Special Medical Needs

### Introduction:

The term “medically fragile” is used to describe Kentucky’s children in out-of-home care who have a medical condition, documented by a physician, which can become unstable and change very quickly into a life-threatening situation. **SOP** lists some conditions that may require designation as medically fragile (**SOP 7E.1.4(B)**)

For a child to become designated as Medically Fragile the child’s Social Service Worker must seek approval. The Medical Support Section in DCBS’ Quality Central will review and advise the Regional Staff of eligibility. If a child is designated Medically Fragile there are additional Standards of Practice that become important. Each region has a designated Medically Fragile Liaison who will assist the Social Service Worker in insuring that the child’s medical needs are addressed.

### Individual Health Plans

Each Medically Fragile child is to have an “Individual Health Plan (IHP)” to be completed with input from the birth parents, resource parents, medical/rehabilitative health Care Providers. A copy of this IHP is to be kept in the passport as well as sent to the Regional Medically Fragile Liaison. The IHP is to be reviewed quarterly and reevaluated every six months. The DCBS Medical Support Section staff may also assist and provide consultation.

### Placement of Medically Fragile Children

A child who is designated as medically fragile should generally be placed in a resource home that is approved to care for medically fragile children. There are several levels of certification and this involves additional training and/or a nursing degree. If a medically fragile child is not placed in a medically fragile home, it is the SSW, in consultation with the Medically Fragile Liaison who must determine how the child’s medical needs may be met. A letter must be sent to the DCBS Commissioner from the local Service Region Administrator explaining the placement. This situation might occur if the child is placed in a Private Child Care Program (PCC) or a foster home that is not medically fragile certified.

### The Monthly Report

Resource parents or other Care Providers of medically fragile children are to submit monthly reports (see sample form). These will be submitted to the child’s Social Service Worker and then forwarded to the Medically Fragile Liaison. Please include information such as diagnosis medications, therapies, appointments, specialists seen, procedures completed or planned, hospitalizations, height and weight, new developments, and any other pertinent information or changes occurring during the month. If you do not already have a preferred format, a reproducible sample report form is printed on the back of this page. The child’s monthly report information may in fact need

more space than that which is provided in the sample. Please use additional sheets or redesign your own form including the same information as needed. File copies of your reports in this section.

### Copies of Other Documents to be Included in this Section:

- ☐ Therapy Notes
- ☐ Tube Feeding Flow Sheets for Intake Monitoring
- ☐ Infant Stimulation Notes
- ☐ Articles and Pamphlets Specific to Child’s Condition
- ☐ Apnea Alarm / Event Records
- ☐ Education / IEP Plans Outlining Medical Adaptations for the Child During School

MEDICALLY FRAGILE AND  
CHILDREN WITH  
SPECIAL NEEDS

# Drug Endangered Children

## Introduction:

There is a strong likelihood that children in out of home care have been endangered due to exposure to drugs or drug environments. Such exposure may make the child more vulnerable to certain medical, mental/emotional and developmental problems. It is therefore important that screenings, assessments, exams and interventions are administered at particular intervals following the drug exposure.

## Responses:

Children may respond differently to environmental drug exposure based on:

- ⇒ The age of the child,
- ⇒ The length of exposure,
- ⇒ Chemicals to which they are exposed,
- ⇒ The individual child's physical functioning,
- ⇒ The type of exposure (airborne toxins, direct skin contact, ingestions, injections), and/or
- ⇒ Familial life style issues

## Caution!

You should avoid quick conclusions concerning the origin of many physical, developmental, and behavioral symptoms exhibited by these children. Many of the damaging effects of abuse and neglect will contribute to some of the same symptoms. A medical assessment is needed to make the determination if intervention is appropriate.

## Methamphetamine:

If the child was removed from a methamphetamine production site (lab), they should have been examined and screened at a hospital emergency room prior to coming to your home. The child should also have been showered or bathed and put in clean clothing, including shoes, at the hospital or at the removal site. If this procedure has been followed, the child should present no contamination risk to you or your family. **SOP 7B.5.1 (CHILD(REN) EXPOSED TO METHAMPHETAMINE PRODUCTION (METH LAB) INVESTIGATIONS)** contains the procedures a worker is to follow when removing a child from a meth contaminated environment.

During the visit to the hospital emergency room, a health provider should:

1. obtain a urine sample, preferably within 2 hours (possibly up to 12 hours),
2. perform a medical assessment prior to placement and
3. assure a complete change of clean clothing for the child.

If a child is placed without this occurring, don't panic. The resource home can simply wash the child with soap and water, discard the old clothing, including shoes, and provide new clothing.

The resource parent needs to know the plan for a continued medical and developmental assessment. This plan also needs to be shared with the health care providers for their education. The medical and developmental assessment is contained on the Drug Endangered Child form.

Although exposure to any drug environment creates risks for children, methamphetamine exposure (presence in a meth lab or presence when meth is being smoked) poses, perhaps, the most immediate physical risk. Some meth exposed children may experience:

- ⇒respiratory problems (some will exhibit asthma-like symptoms),
- ⇒irritation of the eyes, nose, and bronchial system,
- ⇒decreased appetite,
- ⇒increased heart rate,
- ⇒abnormally high body temperature,
- ⇒rashes or rash like lesions,
- ⇒abdominal pain, vomiting, and/or diarrhea,
- ⇒vacillations between sleepiness or exaggerated activity,
- ⇒language delay (for very young children) and other learning problems,
- ⇒some potential memory problems,
- ⇒depression and withdrawal,
- ⇒decreased attention span and concentration problems,
- ⇒mood swings,
- ⇒guilt or
- ⇒shame

Many of these symptoms may be short term and the child may normalize quickly after removal from the toxic environment. It is unknown at this time if exposure to drugs or dangerous chemicals used to produce methamphetamine will have long term implications. This is part of the reason it is important to carefully follow the accompanying medical and developmental routine.

#### Using the Form (Methamphetamine Exposure Medical Evaluation and Follow-Up - DPP106I )

All children that have been exposed to methamphetamine, or the chemicals used to produce methamphetamine, shall be taken to an emergency room or appropriate medical facility for a complete medical assessment. At the time of the initial evaluation, the State Social Services Worker completes the DPP106I Methamphetamine Exposure Medical Evaluation and Follow-Up Form.

Note for State Social Services workers:

The Methamphetamine Exposure Forms may be accessed at SOP 7B 5.1 or in the Forms Section of the on line policy manual. The link to the on line policy manual is [http://manuals.chfs.ky.gov/dcbs\\_manuals/DPP/index\\_dpp.asp](http://manuals.chfs.ky.gov/dcbs_manuals/DPP/index_dpp.asp).

The link for forms is on the bottom left hand side of the page. Please check SOP often for changes in the protocol for dealing with methamphetamine exposed children.

# Kentucky Revised National Protocol for Medical Evaluation of Children Found in Methamphetamine Drug Labs

## With Addendum for Vulnerable Adults

November 1, 2005

### For the Social Services Worker

#### Immediate Response:

##### Assessment

Assess the child or vulnerable adult for obvious injury or distress; if any of the below examples are noted, **ACTIVATE EMS IMMEDIATELY.**

Examples include but are not limited to:

- Rapid Breathing
- Difficulty Breathing
- Appears ill
- Injuries that are worrisome such as burns
- Lethargy (sluggishness, apathy)
- Somnolence (Sleepy or Drowsy)
- If there is an explosion
- If there are active chemicals at the scene
- EMS, if contacted, will make decisions regarding need for emergency intervention including full documentation

##### Cleansing or Containment

- Should occur prior to transport
- Gloves should be worn so as not to expose worker
- Clothing should be removed
- Cleanse the hair and skin of child or vulnerable adult. A warm shower is adequate and preferable to a bath
- New clothing should be given to child or vulnerable adult as all the clothing inside the area where the methamphetamine lab is located is considered contaminated.
- If unable to cleanse, place a sheet on car seat for transport to an acceptable facility

##### Collect

- Collect urine from potentially exposed children and vulnerable adults as soon as possible, preferably within 2 hours of removal
- Urine should be screened quantitatively for drugs of abuse (this should indicate the number of particles found not just positive or negative results)
- There are NO ACCEPTABLE levels of methamphetamine in children.

#### Within 2-4 hours:

##### Medical Examination

- The child or vulnerable adult should be evaluated in Emergency Room, Physician's Office, etc. by a qualified medical professional.
- Includes vital signs, a thorough lung examination, respiratory rate and oxygen saturation on room air.
- Blood tests: CBC with Differential, Chemistry Panel to include BUN and Creatinine and Liver Panel
- In children and vulnerable adults a chest x-ray, 12 lead EKG and pulmonary function tests if clinically indicated

#### Within 72 hours:

- If Liver Panel is elevated, Hepatitis B and C panels should be evaluated.
- Mental Health Evaluation
- Dental evaluation
- For children, a developmental evaluation with special attention to speech, language and motor skills

#### Follow up:

- For children, repeat the medical examination in 30 days, 6 months and 1 year.
- A medical examination follow-up for vulnerable adults is at the discretion of their medical practitioner as some vulnerable and elderly adults may be more sensitive to cardiac and respiratory effects of methamphetamine chemicals.
- For children, follow-up developmental recommendations as needed
- In both children and vulnerable adults follow-up mental health recommendations as needed.

# Kentucky Revised National Protocol for Medical Evaluation of Children Found in Methamphetamine Drug Labs With Addendum for Vulnerable Adults

November 1, 2005

## For the Emergency Department of Physician's Office

### Immediate Response:

Children should have at least a preliminary decontamination at the scene to include removal of clothing and cleansing of hair and skin at the before transport.

### Medical Examination:

Complete Medical Examination to assess Acute Medical Needs

- Urine for Toxicology (quantitative) COLLECTED AS SOON AS POSSIBLE, PREFERABLY WITHIN 2 HOURS, should be submitted to a lab that screens and reports for the level of detection and not just NIDA standards. Chain of evidence forms may be utilized of usual medical protocols for toxicology screens should be followed.
- Thorough Pulmonary Examination (minimum standard for the symptomatic child):
  - Vital signs
  - Respiratory Rate
  - O2 Saturation
  - CXR
- Labs (can be done acutely or within 72 hours):
  - CBC with Differential
  - Chemistry Panel to include BUN and Creatinine
  - Liver Function Test

Vulnerable adults including the elderly may be more sensitive than children to the cardiac and respiratory effects of toxins found in a methamphetamine lab. O2 sats, ECG and CXR are Recommended
